Best

Websites for Developers

1. Stack Overflow

This is a public platform that technologists use to ask and answer questions about coding. Stack Overflow has more than 100 million users.

Most people head to Stack Overflow to troubleshoot technical questions. For example, people ask quick questions like how do I compare strings in Java?
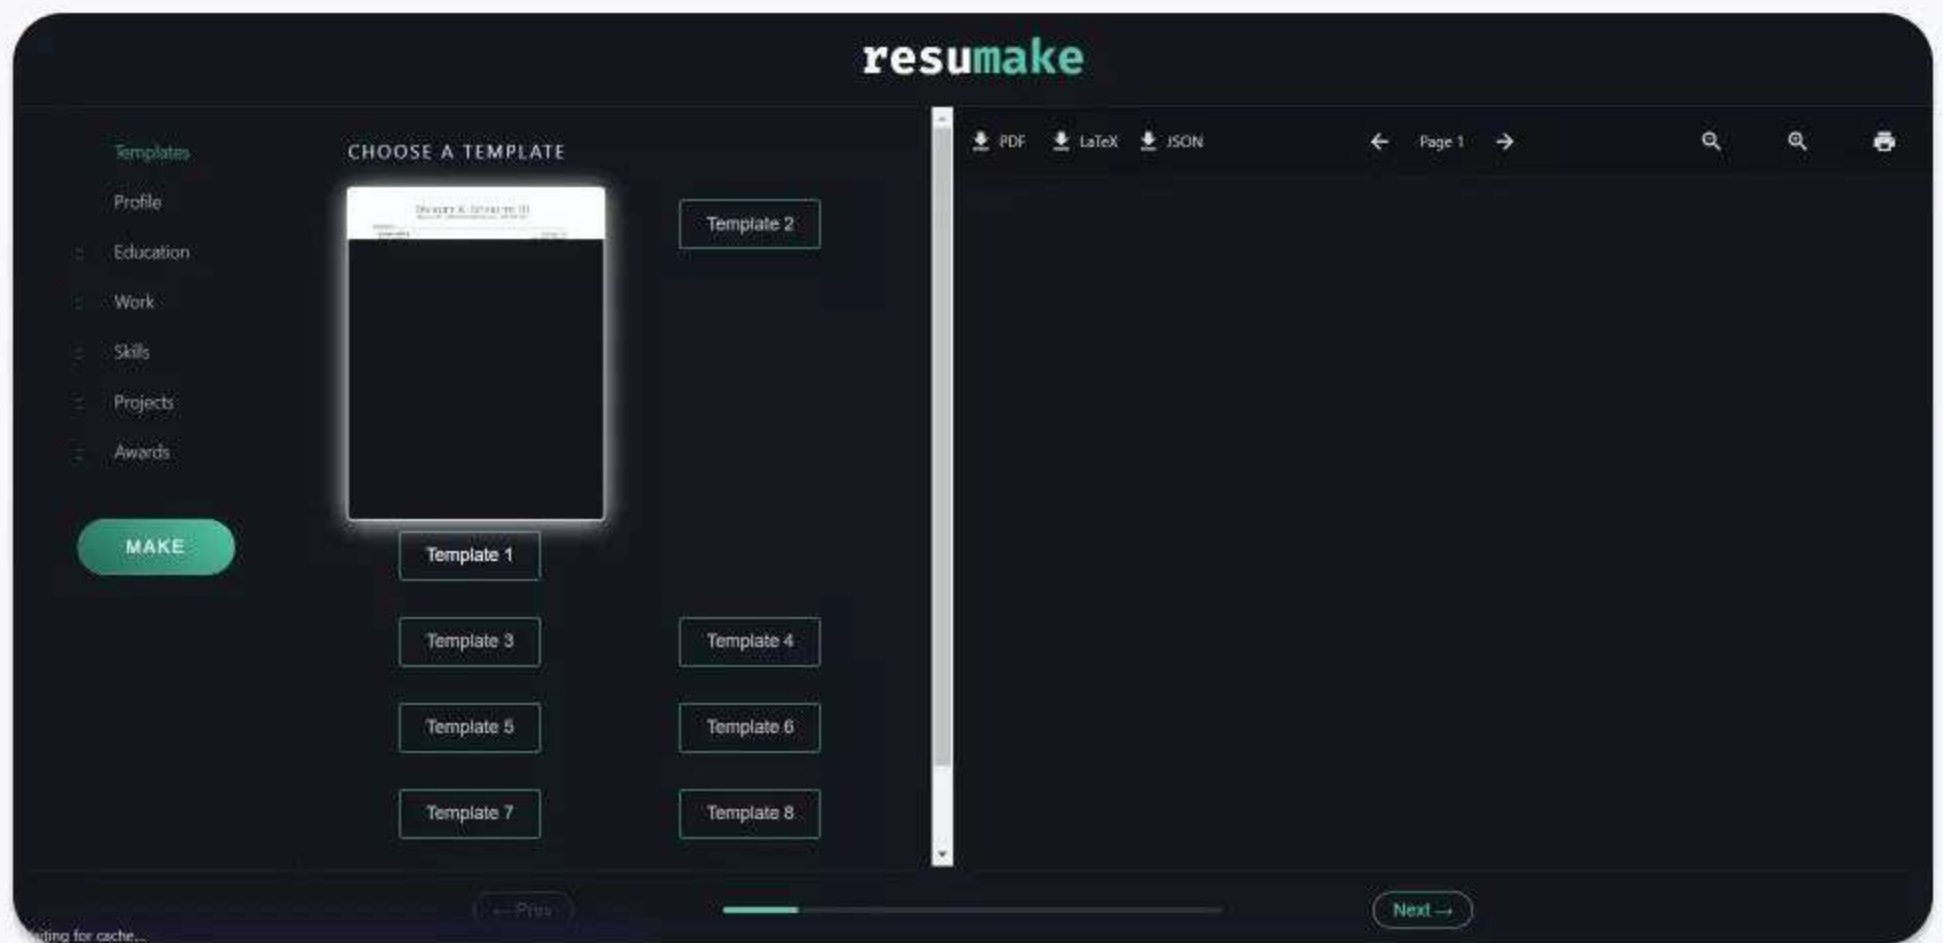

2. DevDocs

DevDocs is a single-page open source app that allows you to search documentation of all popular programming languages and frameworks.
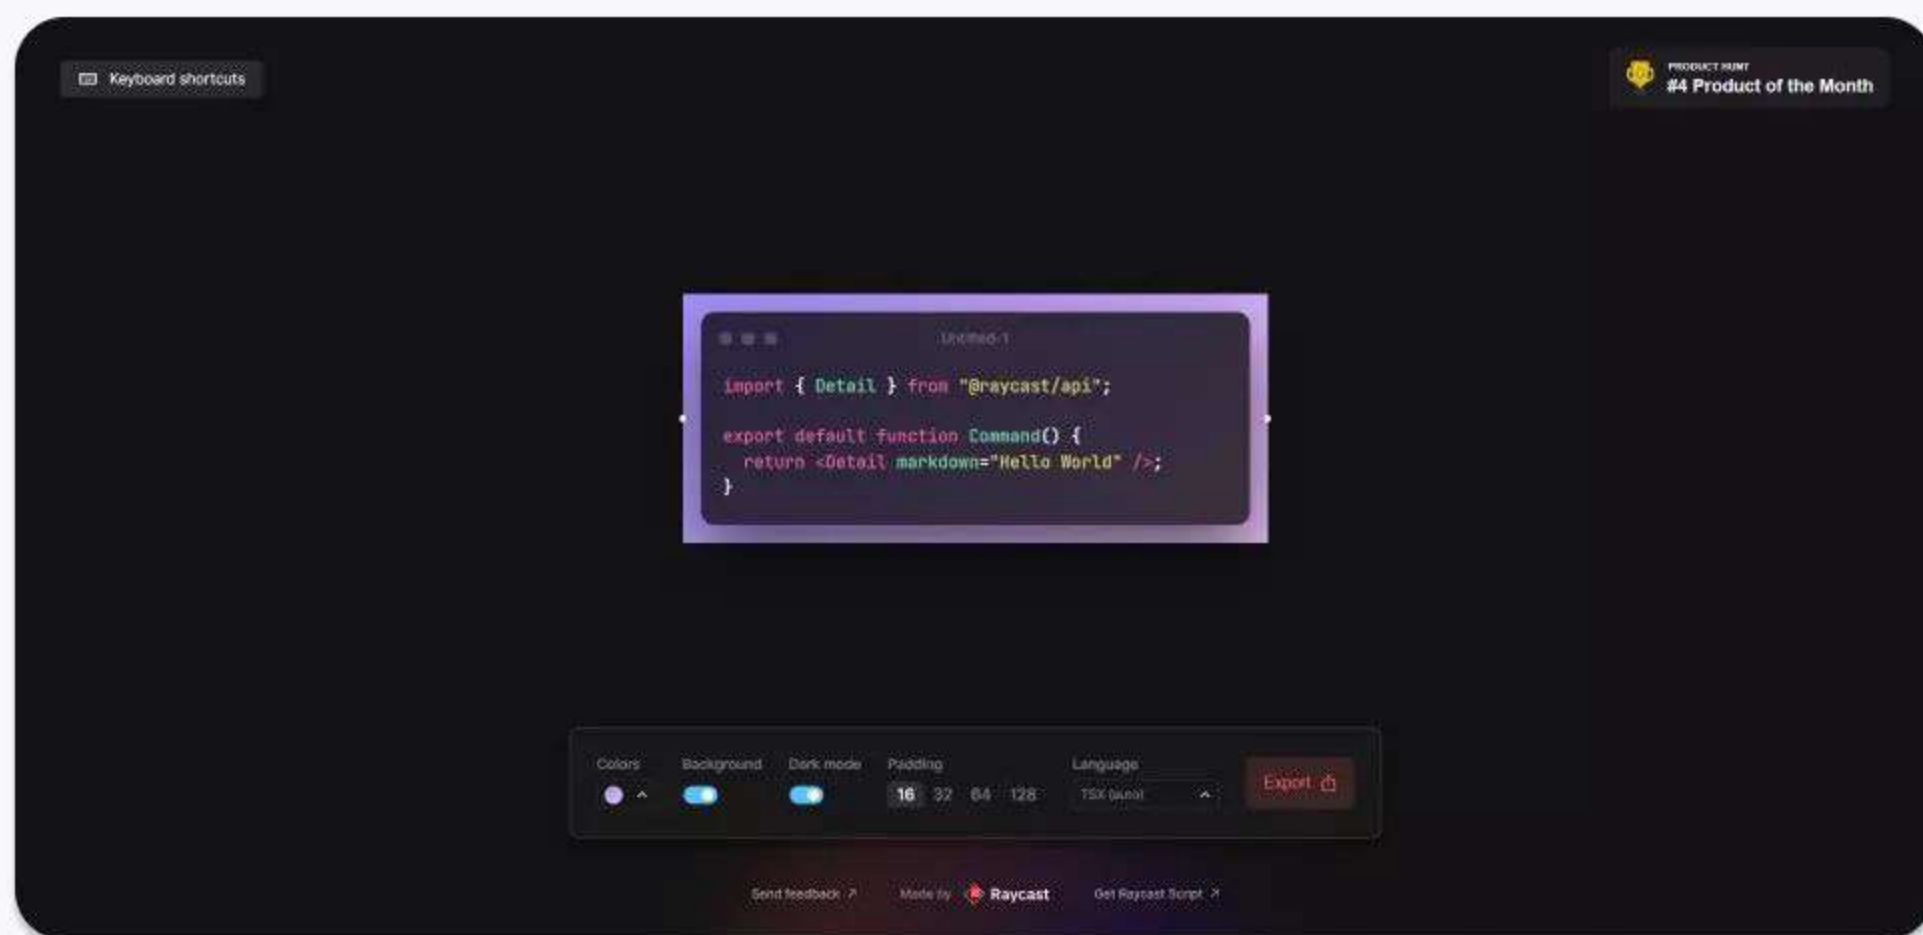

3. Resumake

Resumake is an open-source website that helps you make a resume for applying to Software Engineering jobs.
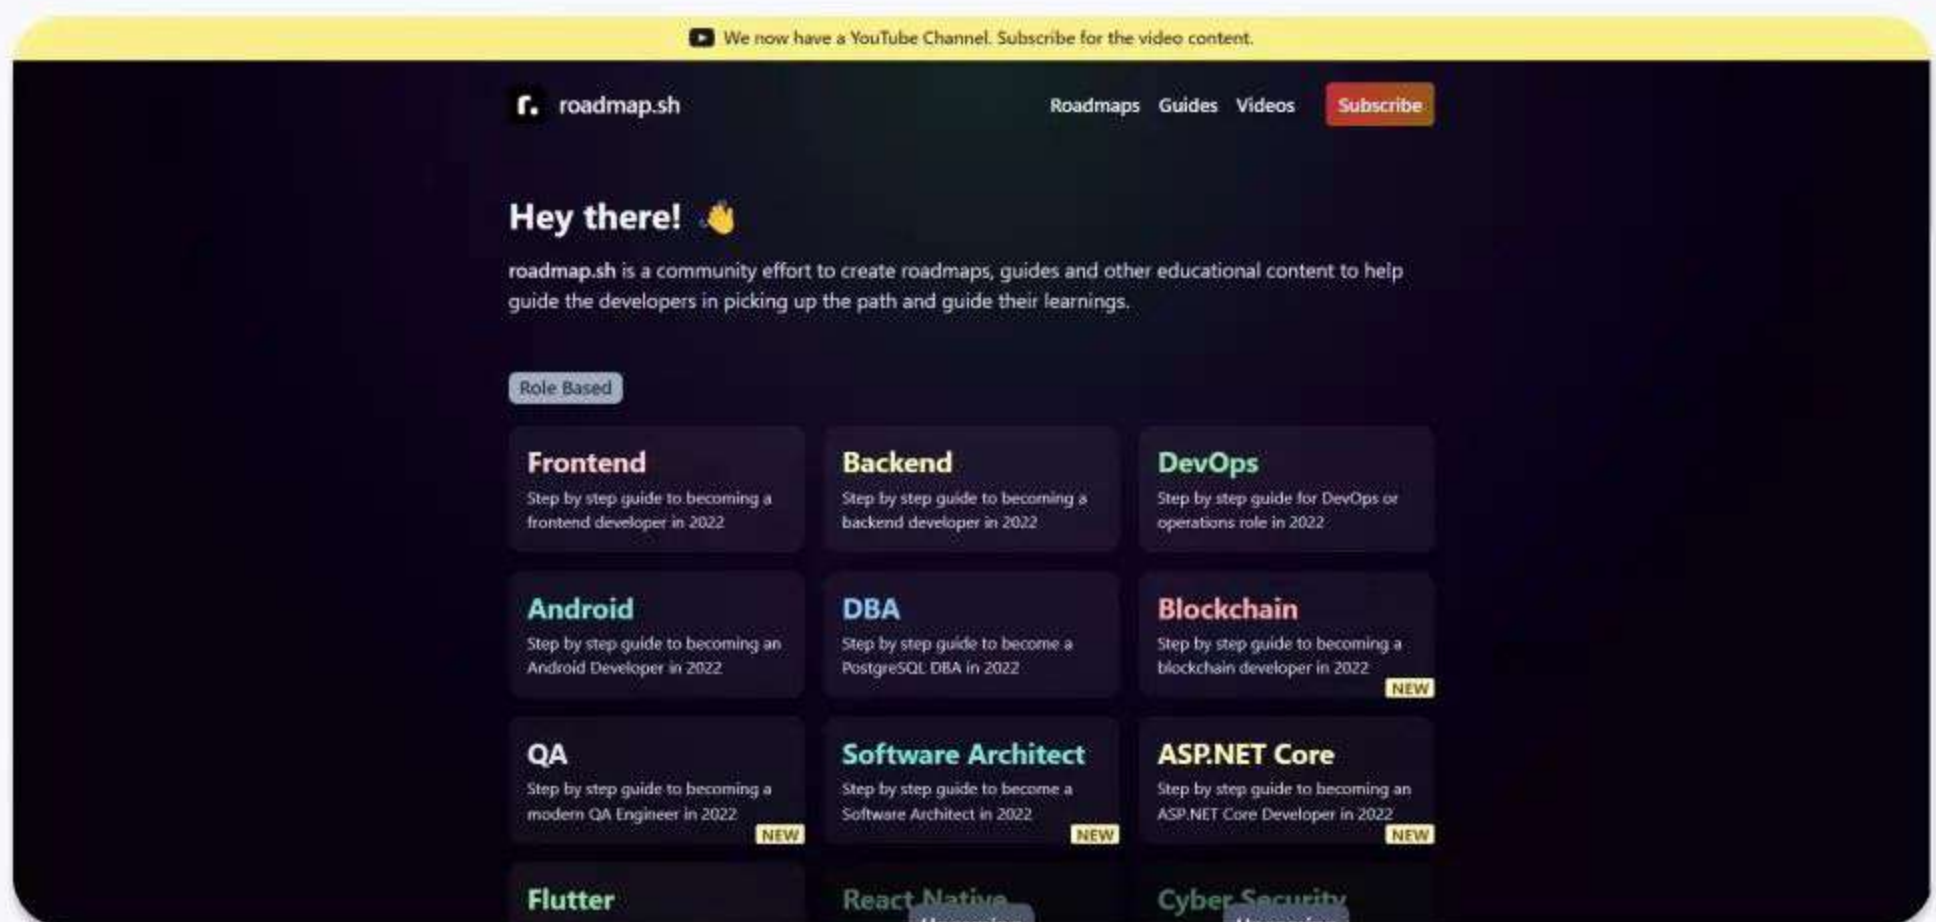

4. Ray.so

This website allows you to take beautiful screenshots of codes. It also has a dark mode and some preloaded themes for different programming languages. You can also use its VS Code extension.

5. Roadmap.sh

This website provides roadmaps, guidelines, and other educational content to assist developers in choosing a path and directing their learning.
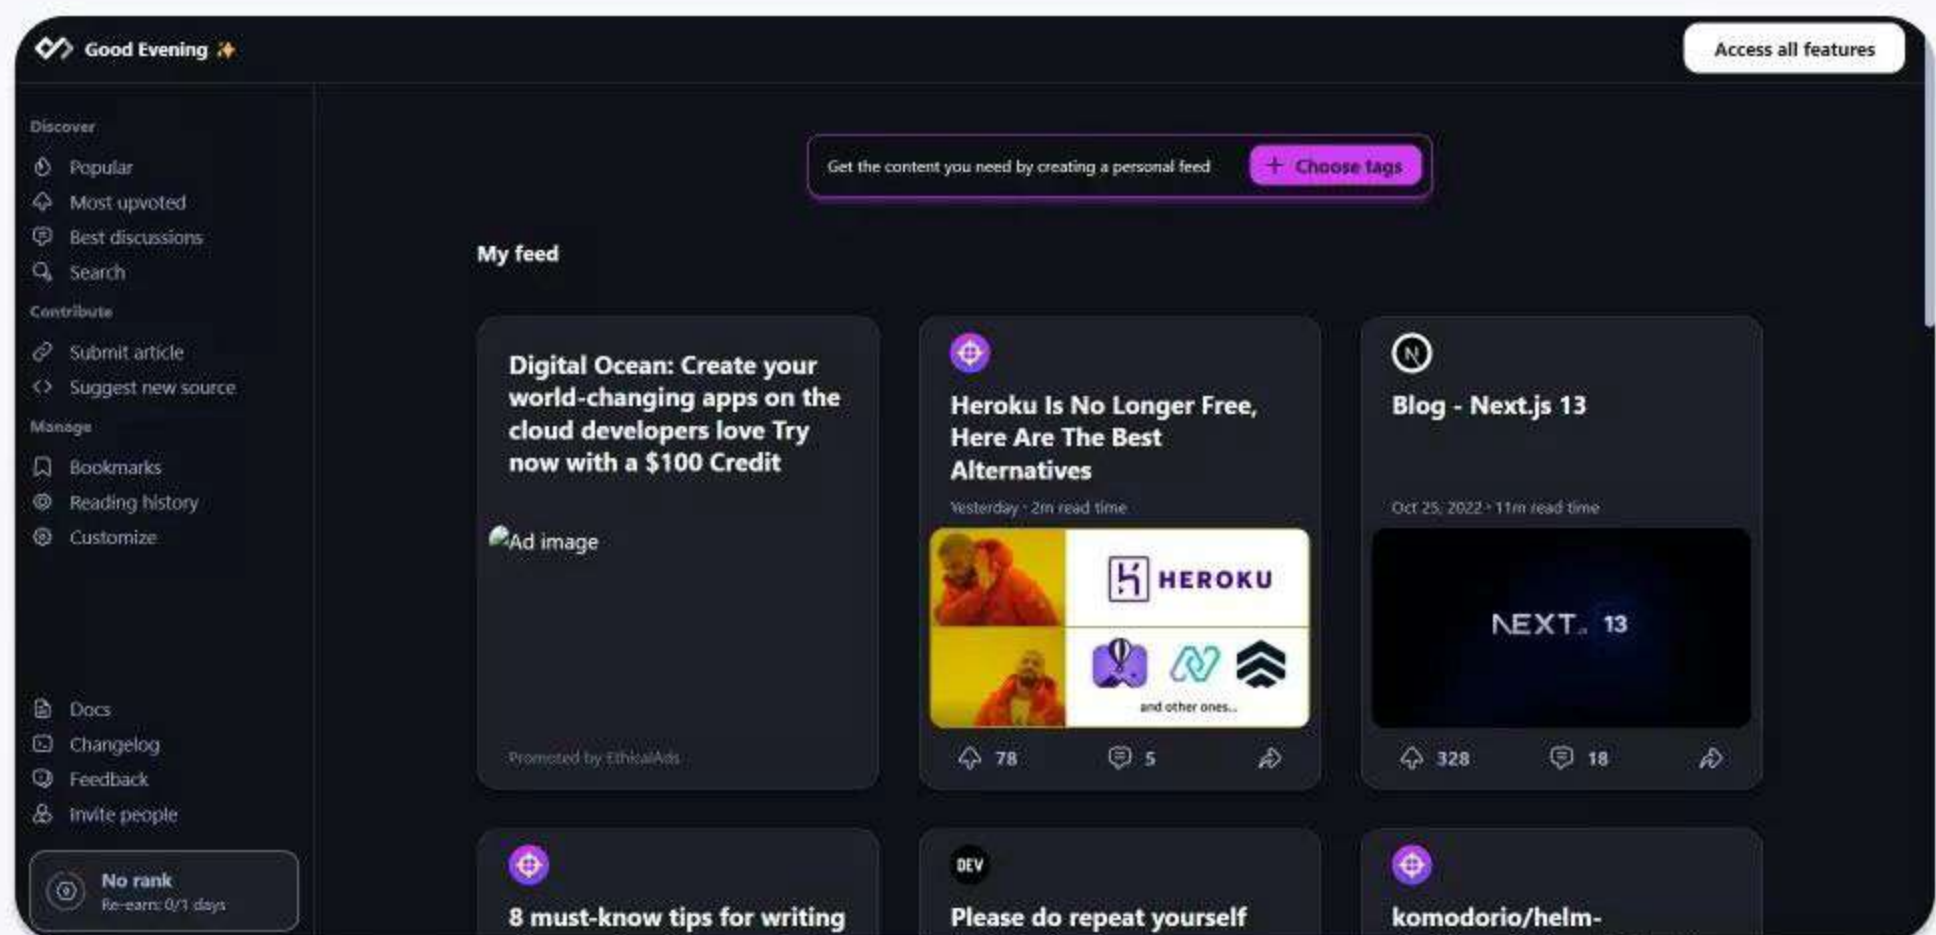

It is very helpful for a beginner as well as a learner who needs guidance.

6. Daily.dev

It is a platform where you can find so many good articles to read daily. It shows the best articles from various platforms directly in your feed.
Stay updated with quality content from various platforms directly into your browser by using its extension.

7. Color Hunt

Colorhunt is a website that allows you to select gorgeous colour palettes. Web designers will find it very beneficial to choose beautiful and appealing colours, as well as to accept colour recommendations from other artists and art projects.
